DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 1. Claims 1, 3-6, 8-12 and 22-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Kunikiyo (US 6,717,267).
- 2. Regarding claims 1 and 23, Kunikiyo (e.g. fig. 8) shows a semiconductor configuration for dissipating heat away from a semiconductor device having a plurality of power bus lines, comprising: a semiconductor substrate 1, and a plurality of interconnect structures (26c, 25a, 26a, 21a,c, 22a, 9a) disposed on the substrate and in contact therewith and extending through the semiconductor device, the interconnect structures for dissipating heat through the substrate (col. 9/lls. 1-6). Note that the heat flow from the active device in the substrate to the non-active area and then to the dummy patterns.
- 3. Regarding claim 3, Kunikiyo shows that the each of the plurality of interconnects structures comprises at least one via stack 9a.
- 4. Regarding claim 4, Kunikiyo shows that the plurality of interconnects structures are close to a power line 19c (see fig. 13).

5. Regarding claim 5, Kunikiyo shows that at least one of the plurality of interconnect structure (26a, 26c) is joined to one other of the plurality of interconnect structures using a bridge structure 25a.

Page 3

- 6. Regarding claim 6, Kunikiyo shows bridge structures 25a, each of the bridge structures joins a respective one of the plurality of interconnect structures (26a, 26c)
- 7. to one other of the plurality of interconnect structures.
- 8. Regarding claim 8, Kunikiyo shows that the interconnect structures (26c, 26a) are spaced apart form each other by width of one of the interconnect structures (e.g. 25a).
- 9. Regarding claim 9, Kunikiyo shows that the plurality of interconnect structure (26c and 26a) is alternatively spaced apart form a serpentine power line 25a by a distance (e.g. fig. 9).
- 10. Regarding claim 10, Kunikiyo shows that the distance is a width of one of the plurality of interconnect structures (e.g. 25a).
- 11. Regarding claim 11, Kunikiyo shows that each of the interconnect structures (21c) is spaced apart from a power line 19c by a distance (see fig. 13).
- 12. Regarding claim 12, Kunikiyo shows that the distance is the width of one of the plurality of interconnect structures (e.g. 21a).
- 13. Regarding claim 22, Kunikiyo (e.g. fig. 8) shows a semiconductor configuration for dissipating heat away from a semiconductor device having a plurality of power bus lines, comprising: a semiconductor substrate 1; and a plurality of interconnect structures (26c, 25a, 26a, 21a,c, 22a, 9a), each of the interconnect structures having at least one

Art Unit: 2826

via stack, the interconnect structure disposed on the substrate and in contact therewith and extending through the semiconductor device, the interconnect structures for dissipating heat through the substrate (col. 9/lls. 1-6). Note that the heat flow from the active device in the substrate to the non-active region and then to the dummy patterns.

14. Regarding claim 24, Kunikiyo (e.g. fig. 8) shows a method for forming a semiconductor configuration for dissipating heat away from a semiconductor device having a plurality of power bus lines, comprising: providing a semiconductor substrate 1, and a forming plurality of interconnect structures (26c, 25a, 26a, 21a,c, 22a, 9a) disposed on the substrate and in contact therewith and extending through the semiconductor device, the interconnect structures for dissipating heat through the substrate (col. 9/lls. 1-6). Note that the heat flow from the active device in the substrate to the non-active region and then to the dummy patterns.

Claim Rejections - 35 USC § 103

- 15. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 16. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

Application/Control Number: 10/829,583

Art Unit: 2826

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

- 17. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kunikiyo (US 6,717,267).
- Regarding claim 7, Kunikiyo teaches most aspects of the instant invention 18. including an interconnection structure having a width (i.e., design variable col. 15/lls, 24-41), but does not disclose that the interconnect structure is from about 0.1 to 10 micrometers. Nonetheless, the specification contains no disclosure of either the critical nature of the claimed arrangement or any unexpected results arising therefrom. Where patentability is said to be based upon particular chosen dimensions or upon another variable recited in a claim, the applicant must show that the chosen dimensions are critical. In re Woodruff, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990). Also, the specific width claimed by applicant, i.e., from about 0.1 to 10 micrometers, absent any criticality, is only considered to an optimum value of the interconnect width structure disclosed by the Prior Art that a person having ordinary skill in the art would have been able to determine using routine experimentation based, among other things, on the desired accuracy, manufacturing costs, etc. (see In re Boesch, 205 USPQ 215 (CCPA 1980)), and since neither non-obvious nor unexpected results, i.e., results which are different in kind and not in degree from the results of the prior art, will be obtained as long as an interconnect structure is used as already suggested by the Prior Art.

Application/Control Number: 10/829,583

Art Unit: 2826

19. Claims 2 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over

Page 6

Kunikiyo (US 6,717,267) in view of Khan et al. (US 6,853,070).

20. Regarding claims 2 and 25, Kunikiyo shows most aspects of the instant invention

including a substrate but does not disclose a heat sink in contact with the substrate.

Nevertheless, Khan (e.g. fig. 2A) shows a mounting structure including a heat sink

110/134 in contact with the substrate 102. According to Kahn this type of mounting

structure provides an improved thermal, mechanical and electrical performance

because the thermal stress is reduced due to a matched thermal coefficient (col. 1/lls.

52-67; col. 2/lls. 1-6 and col. 3/lls. 14-21). It would have been obvious to one of

ordinary skill in the art at the time the invention was made to mount the device disclosed

by Kunikiyo in the mounting structure disclosed by Khan which includes a heat sink in

contact with the substrate to provide a semiconductor package having a reduce thermal

stress in order to improve the thermal, mechanical and electrical performance of the

package.

Allowable Subject Matter

21. Claims 13-21 are objected to as being dependent upon a rejected base claim,

but would be allowable if rewritten in independent form including all of the limitations of

the base claim and any intervening claims.

Conclusion

22. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Leonardo Andújar whose telephone number is 571-272-

Application/Control Number: 10/829,583

Art Unit: 2826

1912. The examiner can normally be reached on Mon through Thu from 9:00 AM to

Page 7

7:30 PM EST.

23. If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Nathan J. Flynn can be reached on 571-272-1915. The fax phone number

for the organization where this application or proceeding is assigned is 703-872-9306.

24. Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
